Use Case Specification: UC-19

- **ID / Code:** UC-19
- **Use Case Name:** Adjust Dates for Non-Working Days
- **Description:** Shared subfunction included by UC-13 and UC-23 that checks a calculated date (invoice due date, scheduled notification or reminder) against the business calendar and postpones it to the next working day if it falls on a weekend or holiday.
- **Primary Actor:** None (included use case; executed by the System on behalf of UC-13 / UC-23)
- **Scope:** Subscription Management & Invoicing System
- **Level:** Subfunction
- **Stakeholders & Interests:**
  - *Customer company:* Does not want due dates or reminders on non-working days.
  - *Company (Product Owner):* Wants dates consistent with the regional business calendar (FR-4.4).
- **Preconditions:** The business calendar (working days, weekends, regional holidays) is configured (FR-4.4.1, UC-28).
- **Postconditions:** The returned date is a working day.
- **Success Guarantee:** The including use case receives the original date if it is a working day, or the next available working day otherwise (FR-4.4.2).
- **Minimal Guarantee:** The original date is never moved earlier; if the calendar is unavailable, the original date is returned and an alert is generated.
- **Trigger:** UC-13 calculates a due date or UC-23 schedules a notification.
- **Main Success Scenario:**

1. **System:** Receives a calculated date and the region/calendar applicable to the customer.
2. **System:** Checks the date against the business calendar.
3. **System:** The date is a working day; it is returned unchanged to the including use case.

- **Extensions:**
  - 2a. No calendar is configured for the customer's region:
    - 2a1. System uses the default calendar and alerts administrators (Assumption).
  - 3a. The date falls on a weekend or holiday:
    - 3a1. System searches for the next working day in the calendar.
    - 3a2. System returns the adjusted date and records the adjustment.
