Use Case Specification: UC-12

- **ID / Code:** UC-12
- **Use Case Name:** Review Flagged Prices & Annual Tiers
- **Description:** At the beginning of each period, the system automatically identifies accounts that require an annual revenue-range and pricing review and collects prices flagged as inconsistent; an Administrator reviews them, validating or modifying prices without retroactive adjustments.
- **Primary Actor:** Administrator
- **Scope:** Subscription Management & Invoicing System
- **Level:** User Goal
- **Stakeholders & Interests:**
  - *Administrator:* Wants a clear list of accounts to review, with data sources (FR-6.6.2).
  - *Company (Product Owner):* Wants pricing aligned with customers' revenue tier and human validation of anomalies (FR-2.6.1, FR-6.6.1).
  - *Customer company:* Expects past invoices not to be changed retroactively (FR-6.6.2).
- **Preconditions:** Pricing ranges are configured (UC-11). The Administrator is authenticated for the manual part.
- **Postconditions:** Each reviewed account has its price validated or updated, and its review is closed.
- **Success Guarantee:** Validated or modified prices are recorded with data sources, user, timestamp, previous and new price (FR-2.6.4, FR-6.6.2) and applied only to future invoices.
- **Minimal Guarantee:** No price change is applied automatically without human validation, and past invoices are never adjusted.
- **Trigger:** Beginning of the annual period (scheduled review), or a price is flagged as "Pending Review" (UC-08, UC-11).
- **Main Success Scenario:**

1. **System:** Initiates the annual pricing review process at the beginning of the period.
2. **System:** Identifies accounts that require revenue-range and pricing review and adds them, together with prices flagged as "Pending Review", to the review queue (FR-6.6.1, FR-2.6.1).
3. **System:** Notifies administrators and shows the pending reviews in the dashboard (FR-6.2).
4. **Administrator:** Opens an account from the review queue.
5. **System:** Displays the current price, applicable range, revenue tier, data sources used and pricing history.
6. **Administrator:** Validates the current price or enters a new price and the data source justifying it.
7. **System:** Records the decision in the pricing audit trail (FR-2.6.4), applies the new price from the next billing cycle and removes the account from the queue.

- **Extensions:**
  - 2a. No accounts require review:
    - 2a1. System records the execution and ends the process.
  - 6a. New price outside the configured range:
    - 6a1. System requires a commercial exception (UC-09) to be approved before applying it.

- 6b. Administrator postpones the review:
  - 6b1. The account remains in the queue as pending.
