Use Case Specification: UC-14

- **ID / Code:** UC-14
- **Use Case Name:** Manage Ad-Hoc & Test Invoices
- **Description:** Allows an Administrator to manually create one-off (ad-hoc) invoices for a customer and to create, edit and delete test/draft invoices that have not been issued, keeping a secure audit log (UR-2.3, FR-2.3). If the target period is locked, UC-17 may extend this use case. Extension point: *period locked* (step 5) ⟶ UC-17.
- **Primary Actor:** Administrator
- **Scope:** Subscription Management & Invoicing System
- **Level:** User Goal
- **Stakeholders & Interests:**
  - *Administrator:* Wants to bill extra services, manage draft lifecycle or correct situations not covered by recurring billing (UR-2.3, FR-2.3.1).
  - *Company (Product Owner):* Wants drafts to be editable but every change audited (FR-2.3.2).
  - *Auditor:* Requires that issued invoices can never be edited or deleted.
- **Preconditions:** The Administrator is authenticated (UC-01); the customer exists.
- **Postconditions:** The invoice exists in "draft" or "ready to issue" state, or the draft has been deleted.
- **Success Guarantee:** The ad-hoc/test invoice is stored with autofilled customer data, correct taxes and attachments, and edits or deletions of unissued test invoices are recorded in the audit log (FR-2.3.2).
- **Minimal Guarantee:** Issued invoices are never edited or deleted; no invoice is created, edited or deleted in a locked period without an audited override (FR-2.7); reloading the page never duplicates an invoice (NFR-1.5).
- **Trigger:** The Administrator selects "New invoice" or opens a draft invoice.
- **Main Success Scenario:**

1. **Administrator:** Enters the invoice details and optionally attaches supporting documents (FR-2.2.3).
2. **System:** Displays the invoice form with customer and billing data autofilled (FR-2.2.1).
3. **Administrator:** Adds line items, quantities and prices, optionally attaches documents (FR-2.2.3), and indicates whether it is a test invoice.
4. **System:** Calculates taxes and totals with exact precision (FR-2.2.2, NFR-2.5) and auto-saves the draft (NFR-1.5).
5. **System:** Checks that the invoice date belongs to an open financial period.
6. **Administrator:** Saves the invoice.
7. **System:** Stores the invoice as a draft until it is ready to be issued, and logs the action in the audit trail.

- **Extensions:**
  - 1a. Administrator edits an existing draft/test invoice:
    - 1a1. System loads the draft; the flow continues at step 3.
  - 1b. Administrator deletes a draft/test invoice:

- 1b1. System deletes the draft and logs the deletion (FR-2.3.2). The use case ends.

- 1c. Administrator tries to edit or delete an issued invoice:
  - 1c1. System blocks editing or deletion of the issued invoice
- 3a. Dangerous attachment detected:
  - 3a1. System rejects the file and shows an error (NFR-5.5).
- 5a. Period locked (extension point *period locked*):
  - 5a1. System blocks the operation and informs that the period is closed (FR-2.7).
  - 5a2. If an override is required, UC-17 (Override Locked Period) is executed by a Super-Administrator; otherwise the use case ends.
- 7a. Invoice is ready to be sent:
  - 7a1. The Administrator may continue with UC-15 (Issue & Send Invoice).
